

RGBWW512 - RGBWW Wi-fi Receiver

Description

RGBWW512 is a 12v/24v receiver used to control RGB, RGBW and RGCCT LED strip. RGBWW512 can receive commands from the standard hand held remote RGCCT092 and the RGBIBOX2 which allows you to control your lights through you smart phone or tablet. The RGBWW512 has a 30m line of site that allows you to control your LED striplight with either set colours, colour cycles and also allows smooth dimming should your LED strip be too bright.

Voltage	12v/24v
Wattage	Max wattage is 72w at 12v and 144w at 24v.
Software	Can be used with Android systems (at least version 4.8 or above) or iOS system(version 8 or above).

Installation guidelines

Simply wire between the transformer and the LED Strip within an IP rated enclosure.
